

Patient Pain Medication Consultation Form

Pain Medication-

You may be prescribed pain medication to help control pain for the next 7 to 10 days following surgery OR for an acute painful condition. After 10 days, the dosage of narcotics will typically be decreased over a 2 to 4 week period. You will then be placed on non-narcotics such as anti-inflammatory medication when appropriate. This treatment period will be discussed at your follow up visit.

After Surgery-

For all patients who continue to have pain following surgery or have a condition that requires ongoing pain medication, the office has a consulting service to help with chronic pain. Chronic pain management patients will be referred to this service.

Refills-

You are expected to take your medication exactly as it is prescribed. In the event that you run out of this medication early, the office will not be able to refill the prescription unless Dr Gaiser or his nurse practitioner examines you.

The office will not re-write prescriptions for pain medication that are lost, stolen, destroyed or misplaced.

To get a prescription refill, please call the office at (850) 771-2001 during office hours. Due to the high volume of patients and requests, as well as our doctor's surgical schedule, please allow 48 to 72 business hours, excluding holidays and weekends to process the request. Once the refill request is processed, you will receive a call.

Picking Up Prescriptions-

Most pain medication is considered a narcotic and by law has to be a written prescription. You as the patient must pick up the prescription, however; we understand things come up and someone else might need to pick it up for you. In order for anyone else to pick up the prescription they must be listed on the Authorization to Release Medical Information form and they will need to have a Photo ID with them.

I have read the above information and understand the policy.
